

Card 4: Data Detective

The Hackles Kit

Hackles · a free kit · quillsup.org · October 2026

Hackles Lab · Teacher card · Grades 3-8 · [data-detective/index.html](#)

Learning goal. One clue is harmless; many small clues together can show who someone is and where to find them. Students are Data Protectors, then decide what they would change.

SPECIMEN LABEL	
10 MIN	Pick one made-up kid (Jordan, Mina or Eli). Reveal six posts one at a time, use the prediction chips, read the case file.
20 TO 30 MIN	Add the reflection: Keep, Change or Remove each post, see a safer rewrite, watch the clue board empty. Run the Clue Check, try a second kid, pick one habit.

Screens. Choose a kid. Reveal (clue board: name, age, school, where they live, where they are and when, a password guess). Case file (which post gave away each fact). Reflect (what would you change, Clue Check, habit).

Say first. "These kids are made up and nobody is looking for a real kid. We look at what a stranger could see so we know what to fix."

Privacy and safety. Nothing can be typed, so no personal data can be entered. Remind students never to type real names, schools or addresses into quizzes or pop-ups. Password clues have no safe rewrite: delete them. If a student says their own post looks like this, thank them, say it is never their fault, and fix it together using your usual steps.

Standards (approximate; verify). CSTA 1B-NI-05; ISTE 2a and 2d; CASEL Responsible Decision-Making.

Accessibility. Posts keep reading order with a hidden number label. The board uses words ("known", "not yet") as well as style. Native buttons, 200 percent zoom, Spanish draft.
