
Data-Flow Statement

The Hackles Kit

Hackles · a free kit · quillsup.org · October 2026

© 2026 Competence Collective. Lesson text and teaching materials CC BY-NC 4.0. The Hackles name, logos, characters and artwork are not covered by that license: print and share them unaltered for classroom and family use; any other use needs written permission. [VERIFY with counsel]

Status: DRAFT for local review, 2026-10-05. Not legal advice. Hackles has not been reviewed, approved or endorsed by FLDOE or any state agency. It has not been evaluated in a controlled study. Every legal or statistical statement is marked [VERIFY] or [COUNSEL TO CONFIRM]; ask your own counsel before relying on it.

The statement

No data flows from students, staff or families to the Hackles team or to any third party through the Hackles kit.

The kit is a set of files. Once a school has copied them, nothing in them contacts any outside server. There are no accounts, no logins, no cookies, no analytics, no advertising code, no third-party scripts and no network calls in the interactive tools. The publisher cannot see who uses a copy, which pages are opened, or what students type or choose.

This statement describes the kit as built on 2026-10-05. It does not cover anything you add, such as an online form, a survey tool, an LMS that tracks views, or a school web server that logs requests. Those carry their own data flows under your own policies.

Diagram (text form)

```
The Hackles team (quillsup.org)      Your school or library
  publishes files  ---download--->  copy of files (zips, PDF, Word,
HTML folders)                        |
  (one-way)                          +--> printed paper --> classroom
, families                           +--> your web server, LMS or sha
red drive                            |
                                     |
browser (runs the page locally)      |      +--> student or teacher
                                     |
                                     |
                                     (no arrow goes back to the publisher)
```

THE ONLY OUTBOUND ACTION in the model is the one-time download from the publisher's site, which is an ordinary web request that the downloader initiates. Nothing identifies a student, because students do not download.

Component by component

COMPONENT	WHAT IT IS	DATA SENT OUT	DATA STORED ON THE DEVICE	EVIDENCE
PDF and Word files	Static documents	None	None	Built with ordinary document libraries that the maintainers did not configure to embed scripts or links that load on open. Not inspected file by file. Open a few offline to confirm. [VERIFY]
Printed pages	Paper	None	None	
Static website (kit/17_Website)	Plain HTML and CSS, no JavaScript	None	None	<code>tools/check_site.py</code> fails on any script, form or iframe. Re-run by this pack's author 2026-10-05: PASS
Reader (kit/27_Reader)	Static HTML with a small script for theme choice and local search	None	One setting named <code>hk-theme</code> in browser localStorage, only if the user chooses a theme. It holds a short theme word and never leaves the browser	<code>tools/check_reader.py</code> scans the Reader scripts for cookies, XMLHttpRequest, fetch, sendBeacon, WebSocket, indexedDB, sessionStorage and any http or https URL. Re-run 2026-10-05: all checks passed
Lab (kit/26_Lab)	Six offline browser activities	None	The Lab's scripts, when searched for storage and network calls on 2026-10-05, showed no cookie, localStorage or network-call code. [VERIFY by running the Lab tests]	A scripted test (<code>kit/26_Lab/_tests/net_check.mjs</code>) counts requests that leave the page's own folder; not re-run by this pack's author
Slides (kit/25_Slides)	HTML decks and PowerPoint files	None from the HTML decks. PPTX behavior depends on your presentation software	None	The HTML decks' script states "No network, no storage, no tracking." A search of the HTML decks on 2026-10-05 found no storage or network-call code. Not independently tested in a browser by this pack's author
Paper surveys (optional)	Assessment Pack forms	None to the publisher	Paper kept by the school	School chooses to use them and decides retention. Counsel to review [COUNSEL TO CONFIRM]
Implementation Tracker	Excel workbook	None	Class-level counts only, on your drive	The workbook has no field for a name or ID. Excel's own cloud features, if you save to OneDrive or SharePoint, are governed by your Microsoft agreement

Things that could add data flows (check these on your side)

ADD-ON	POSSIBLE FLOW	WHAT TO DO
School web server or CDN	Request logs with IP addresses	Apply your normal log retention. The Reader and Lab work without any server, so you can use a local folder or a shared drive
LMS with usage analytics	View counts, user ids	Link to the static pages or upload files; turn off per-student tracking for these items if your policy requires
Google Drive or other cloud sharing	Sharing logs, viewer identity	Use a district-managed account, restrict sharing to your domain if appropriate
Browser extensions or filters	They may log pages visited	Not controlled by the kit
Optional Google Fonts link (described in the website README)	Visitor IP sent to Google	Off by default. Do not enable it
Photographs, work samples, student quotes at Hackles Day	Personal data	The kit's default is no photos in promotion. Follow your photo-consent policy
Disclosures made by students	Personal information about a child	Handled under your reporting policy and law, never sent to the publisher

Publisher-side data

ITEM	STATEMENT
Student data	Not received, not requested, not stored
Teacher and parent data	None through the kit. The publisher's website may offer an optional adult newsletter or feedback form. If it does, that form must carry its own privacy notice and the warning "do not include student names or identifying details." [VERIFY current site]
If identifiable information arrives by mistake (for example in a feedback email)	The stated plan is to delete it and direct the sender to the school's reporting protocol. Counsel to advise on any duty. [COUNSEL TO CONFIRM]
Download counts	Possible through cookie-free analytics on the publisher's site. Not on your copy. [VERIFY]

How to verify this yourself in ten minutes

1. Copy the Reader, Lab and Slides folders to a laptop. Disconnect from the network.
2. Open `27_Reader/index.html` and `26_Lab/index.html` in a browser. Everything should work.
3. Open the browser developer tools, Network tab, and reload. You should see only requests to local files.
4. In the Application or Storage tab, look for cookies (expected: none) and localStorage (expected: only `hk-theme` on the Reader, and only after a theme is chosen).

5. Search the folder for "http://" and "https://" in the script files (.js).
Expect only XML namespace strings such as the SVG namespace, which are identifiers and are never fetched.
6. Run `python tools/check_reader.py` and `python tools/check_site.py` if you have Python.

Limits of this statement

- It describes files as built. It cannot promise that no one will alter a copy.
- Verify downloads against the SHA-256 list so you know your copy is unaltered (see the IT and Library Checklist).
- It is an engineering description, not a legal conclusion about FERPA, COPPA, PPRA or any state law. [COUNSEL TO CONFIRM]
- Third-party sites linked from the Reader (for example hotline pages) are normal links that open only when someone clicks them, and they have their own privacy practices.
