OCTOBER 2026

© 2026 Competence Collective. Lesson text and teaching materials CC BY-NC 4.0. The Hackles name, logos, characters and artwork are not covered by that license: print and share them unaltered for classroom and family use; any other use needs written permission. [VERIFY with counsel]

Status: DRAFT for local review, 2026-10-05. Not legal advice. Hackles has not been reviewed, approved or endorsed by FLDOE or any state agency. It has not been evaluated in a controlled study. Every legal or statistical statement is marked [VERIFY] or [COUNSEL TO CONFIRM]; ask your own counsel before relying on it.

What this document is

THIS IS A SELF-ASSESSMENT written in the shape of a Voluntary Product Accessibility Template (VPAT) and Accessibility Conformance Report (ACR), the documents many districts and colleges ask vendors for. [VERIFY current VPAT edition names; the ITI VPAT 2.x editions map to WCAG, Section 508 and EN 301 549] It is not a VPAT, it was not produced by an accessibility auditor, and it makes no claim of conformance. Its job is to tell your accessibility coordinator exactly what was looked at, how, and what nobody has looked at yet.

Why it matters to you. If your public entity posts Hackles files on its own website or LMS, you own the accessibility of what you post. In the United States, the Department of Justice's Title II web rule adopted WCAG 2.1 AA for state and local government web content, with compliance dates of April 26, 2027 and April 26, 2028 depending on population, and the dates were affected by an interim final rule in April 2026. [VERIFIED 2026-10-05 in the kit's compliance checklist: ada.gov/resources/web-rule-first-steps; COUNSEL TO CONFIRM how it applies to you] Free third-party material is not exempt just because it was free. Plan to remediate or offer an accessible alternative on request.

Summary by product

PRODUCT	FORMAT	WHAT WAS CHECKED	STATUS
Reader (kit/27_Reader)	HTML, CSS and a small script	Scripted checks (below). No human assistive-technology test on record	Partly checked. Not claimed as conforming
Lab (kit/26_Lab)	HTML and script, English and Spanish	Scripted browser audit and layout checks (below). No human assistive-technology test on record	Partly checked. Not claimed as conforming
Static website (kit/17_Website)	HTML and CSS	Scripted structure and contrast checks. Human pass listed in the launch checklist, not recorded as done	Partly checked. Not claimed as conforming
Slides, HTML decks (kit/25_Slides/html)	HTML	Built with keyboard and clicker navigation and a live region; no accessibility audit recorded	Not evaluated
Slides, PPTX (kit/25_Slides/pptx)	PowerPoint	A structure checker exists in the repository (check_pptx.py). The decks were not rendered or opened in PowerPoint	Not evaluated
PDFs	PDF made by the kit's build tool	Untagged. No reading order, heading tags, alt text or table headers in the PDF structure. No screen-reader test	Does not meet PDF accessibility expectations. Use the Reader or Word version for screen readers
Word files (.docx)	Word	Built by script from Markdown with headings and table header rows. Not visually verified and not run through Word's Accessibility Checker	Not evaluated
Spanish pages and files	HTML, Word, PDF	Draft. Not reviewed by a native speaker	Not evaluated
Printed pages	Paper	Print-economy and large-print options exist (see the IT and Library Checklist). No user testing	Not evaluated
Excel tracker	Excel	Built with openpyxl, loaded and recalculated with scripts. Excel was not available to open it , so appearance, screen-reader behavior and chart rendering are unverified	Not evaluated

Methods used

METHOD	WHAT IT COVERS	WHO RAN IT AND WHEN
<code>tools/check_reader.py</code>	Every Reader page: each source document has a page; heading order; unique ids; alt text on images; internal links and fragments resolve; no external resource URLs; lang attributes; table headers and captions; status banner and notice present; fonts and licenses; no cookies or network calls in scripts; contrast ratios computed from the style tokens for each theme (21 colour pairs in each of four themes: paper, white, dark and dark by operating-system preference). Lowest ratio checked: 3.01:1, on borders and frames that need 3:1	Re-run by this pack's author on 2026-10-05: all checks passed, 0 warnings
<code>tools/check_site.py</code>	Website: HTML structure, every link and image path, alt text, no scripts or forms, WCAG contrast of every colour pair in the CSS	Re-run 2026-10-05: PASS
Lab audit (<code>kit/26_Lab/_tests/audit.mjs</code> , <code>audit_run.mjs</code>)	Drives each Lab tool through its main states in English and Spanish in a scripted Chromium-style browser and tests the live page for: accessible names on buttons, links and fields; alt text; labelled SVG images; duplicate ids; exactly one h1 and no skipped heading levels; page language; a main landmark; a live region; table header cells; interactive targets of at least 24 by 24 CSS pixels (the WCAG 2.2 minimum target size); no positive tabindex	Written by the kit's maintainers. Not re-run by this pack's author. Run it on your copy if you rely on it
Lab layout check (<code>layout_check.mjs</code>)	Horizontal overflow at 320, 375, 800 and 1280 pixel widths, at normal and "huge" text size, English and Spanish	Same as above: not re-run by this pack's author
Design choices recorded in the stylesheets	Visible focus outline (3 px), reduced-motion media query, skip links on the Reader, color scheme support	Read in the source on 2026-10-05; not tested with real users

THESE ARE HEURISTIC AND automated checks. Automated tools typically find a minority of real accessibility problems. A pass here means "the things we tested did not fail."

WCAG 2.2 criteria: what we can and cannot say

LEVELS A AND AA. "Scripted pass" means a script or heuristic check we named passed. "Not evaluated" means nobody checked. This list picks the criteria most relevant to a lesson site and is not a full conformance table.

CRITERION	READER	LAB	NOTES
1.1.1 Non-text content	Scripted pass (alt text check)	Scripted check exists (alt and labels)	Quality of alt text was not reviewed by a human
1.3.1 Info and relationships	Scripted pass (headings, table headers, captions)	Scripted check exists (headings, table headers)	Reading order not tested with a screen reader
1.4.3 Contrast (minimum)	Scripted pass for all four themes	Not evaluated	Reader contrast is computed from style tokens, not measured on rendered pages

CRITERION	READER	LAB	NOTES
1.4.4 Resize text	Not evaluated	Scripted overflow check at larger text size	Reader not tested at 200%
1.4.10 Reflow	Not evaluated	Scripted overflow check at 320 px	Reader not tested at 320 px. Website checklist item pending
1.4.11 Non-text contrast	Scripted pass for frames and focus ring tokens	Not evaluated	
2.1.1 Keyboard	Not evaluated	Not evaluated. The audit clicks controls through script, which is not a keyboard test	Slides advertise keyboard navigation; untested
2.4.1 Bypass blocks	Skip links present in the page source	Main landmark present	Not tested by a person
2.4.7 Focus visible	Focus ring defined in the stylesheet, contrast computed	Focus outline defined in the stylesheet	Not seen by a person across all controls
2.4.11 Focus not obscured (2.2)	Not evaluated	Not evaluated	
2.5.8 Target size minimum (2.2)	Not evaluated	Scripted check for 24 px minimum	
3.1.1 Language of page	Scripted pass	Scripted check exists	Spanish text unreviewed by native speaker
3.3.8 Accessible authentication (2.2)	Not applicable (no login)	Not applicable	
4.1.2 Name, role, value	Not evaluated beyond landmarks	Heuristic check for accessible names	Custom widgets in the Lab need a screen-reader test
4.1.3 Status messages	Not evaluated	Live region presence checked	Announcements not heard by anyone

What is NOT claimed

- No claim of WCAG 2.0, 2.1 or 2.2 conformance at any level for any product.
- No claim of Section 508 or EN 301 549 conformance.
- No claim that any PDF is accessible. They are untagged.
- No claim that Word files, slides or the Excel tracker have been visually or assistively verified.
- No claim that screen readers (JAWS, NVDA, VoiceOver, TalkBack, Narrator) or switch, voice-control or magnification software have been used on any page. If a district test finds a problem, report it so the kit can be fixed.
- No claim about the accessibility of linked third-party sites.

- No claim that the lessons themselves are suitable for every disability. A disability and inclusion review with a special educator is a pending gate, and the Inclusion and Equity Guide in the kit is guidance, not a review.

What a district should do next

1. Run the Reader and Lab on your own copy with a screen reader and keyboard only: tab through, activate every control, check focus is visible, check at 200% zoom and 320 px width.
2. For PDFs you post, use the Word versions, tag them in your PDF tool, or link to the Reader pages. Offer an accessible format on request and publish your contact route. [local fill]
3. Run Word's Accessibility Checker on any Word file you post.
4. Re-open the PPTX decks in PowerPoint, check slide titles, reading order and alt text, and play the HTML decks with the keyboard.
5. Record what you find. If you send findings back to the publisher, include no student information. [CONTACT: to be added]

Reporting a barrier

[CONTACT: to be added]. Until an address is published, report barriers to your own technology or accessibility office. Say which file or page, what device and assistive technology you used, and what went wrong.
